Whom do we call before the due date?

Build 2's ticket. Read it alone, in silence, with no AI open. It takes six minutes.

What is Rohan asking for?

> "We are launching credit cards in India with no card history of our own, so I have licensed a public card book to prove the method first: 30,000 cardholders in Taiwan, six monthly statements each, April to September 2005. Before October's due date, whom should my team call? A missed default costs us about five times a wasted call. And tell me the error bill of the list you hand me." Rohan Desai, head of risk, Kalpa Financial Services

What is decided, and what does each error cost?

What is decided	A wasted call costs	A missed default costs
Who gets the one action, a call from Kalpa's team, before October's due date	1 unit: a call to someone who would have paid	5 units: no call to someone who then defaulted

What does a finished answer sound like?

A unit gets its rupee price once Kalpa's call centre runs. Fill the blanks with your own numbers:

> "Call these ___ cardholders before the due date. The list costs ___ cost units per 1,000 cardholders, against ___ if we call nobody. Taiwan's score proves the pipeline and is never Kalpa's score."

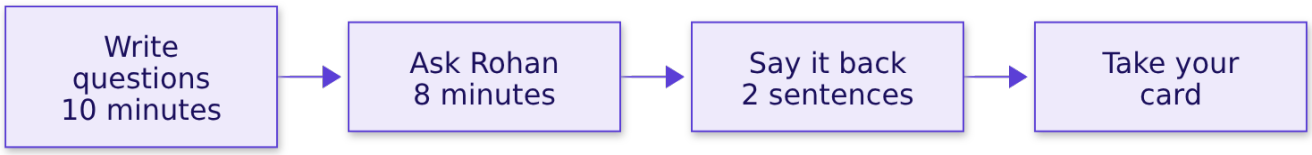

What do we hand in, and on which day?

Day	What you hand in
Tuesday	Workbook pages 1 to 3, on paper
Wednesday	Pages 4 and 5, a first page 6, and the POC running in your repository
Thursday	The approach gate: pages 1 to 6 and the POC run live, every member questioned
Friday	Page 7, the README and the model card; the repository freezes
Saturday	The twelve-minute talk: seven slides, every member speaking

Where may we use AI?

- **No AI:** the frame on paper (Tuesday), the gate and its questions (Thursday), the defence (Saturday) and your numbers passport.
- **AI allowed, and logged:** code. Every use goes in the AI log, and before an AI-written line is committed, a member who did not write the prompt explains it line by line.

How do we run the discovery call?

1. **Write.** For ten minutes, write as many questions as you can. Do not stop to answer them. Turn every statement into a question. Then mark your best seven.
2. **Ask.** Every member asks at least two. Rohan answers only what you ask, so a fact nobody asks for stays hidden.
3. **Say it back.** Rohan picks one member to say the problem back in two sentences: whom we call, why, and what a wrong call costs. He says yes, or he names the gap.

Tick each kind of question once you have asked it:

The decision	Who uses the list	What each error costs	When each column is known	Rules and limits	What success looks like	What could go wrong

What does our constraint card say?

Rohan hands it over at the end of the call. Copy it here, word for word.

Our constraint card
Card number
Rohan's rule, in his words
What we predict it changes in our answer
The first question we will ask about it

Which eight stages does the week climb?

Each stage has one workbook page, and stage 0 is page 1. Tick a stage when its page's last line, "You are ready for the next stage when", is true for every member.

0 Business	1 Frame	2 Requirements	3 Options	4 POC	5 Architecture	6 MVP slice	7 Defend
