CHEAT SHEET

# Who is leaving, and at which step?

Zomato Gold, Chennai, Week 4 Thursday. Month-two retention read flat at 38 percent from June to September 2026 while every cohort fell, and members' Android add-to-cart to order fell from 58 to 44 percent after the 14 September release. Illustrative case: the company is real, the situation and the data are synthetic, built for this class.

6 panels, 2 diagrams

## 1 What does the triangle say?

| | members | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
|---|---|---|---|---|---|---|---|---|---|
| Jan | 4,854 | 58 | 38.7 | 38.4 | 38.1 | 37.8 | 37.5 | 37.2 | 36.9 |
| Feb | 5,055 | 56 | 38.6 | 38.3 | 38.0 | 37.7 | 37.4 | 37.1 | |
| Mar | 5,449 | 55 | 38.6 | 38.4 | 38.0 | 37.8 | 37.5 | | |
| Apr | 4,859 | 53 | 38.6 | 38.3 | 38.0 | 37.7 | | | |
| May | 4,905 | 52 | 38.7 | 38.4 | 38.1 | | | | |
| Jun | 4,821 | 50 | 38.9 | 38.6 | | | | | |
| Jul | 5,057 | 49 | 38.5 | | | | | | |
| Aug (sale) | 13,000 | 31 | | | | | | | |

months since joining run across; month one is the solid column; each cell is the percent of the cohort who ordered that month

| Read | What it shows | On the case |
|---|---|---|
| Across a row | How a cohort's members leave | Down to about 38.5 in month two, then 0.3 points a month |
| Down column one | How each cohort starts | 58 for January, 49 for July, 31 for August |
| The panel grid underneath | One row per member per month, 1 if she ordered | 241,492 member-months, grouped by joining month and age |

**Crux.** Fix each member's joining month, count her age from it, and compare cohorts at the same age, never in the same calendar month.

## 2 What did twelve members say?

| Joined | Month one | Month two | Month three | Month four |
|---|---|---|---|---|
| May, 4 members | 3 of 4 | 2 of 4 | 1 of 4 | 1 of 4 |
| June, 3 members | 2 of 3 | 1 of 3 | 1 of 3 | |
| August sale week, 5 | 1 of 5 | | | |

The dashboard's way, from month two: 2 of 7 in August and in September; everyone before September: 3 of 12.

**Crux.** Each group falls with age and each later group starts lower, while the dashboard's way stands still.

## 3 What is a retention number made of?

| Number | Counts | Over | September |
|---|---|---|---|
| Month-two retention | Members two or more months past joining who ordered | All of them | 13,218 of 35,000 |
| Everyone before the month | Members who joined before it and ordered | All of them | 17,248 of 48,000 |

```
blend = sum of (cohort size x cohort rate) / sum of cohort sizes
```

**Crux.** Rebuilt from its cohorts, a blend lands on the direct count; a plain mean of rates (36.9 against 35.9) misses.

## 4 How does a funnel step read?

| Step, September, members | Per session | Per member |
|---|---|---|
| Search to menu view | 118 percent | 101 percent |
| Menu view to add-to-cart | 34 percent | 61 percent |
| Add-to-cart to checkout start | 80 percent | 91 percent |

```
step rate = reached this step / reached the step before, in one named unit
```

**Crux.** A rate above 100 is a step people can skip (the carousel); among sessions that searched, 89 percent opened a menu.

## 5 Which cause is checked first?

Did the count change; what does the number count; are newer members weaker; did everyone change at once; which step moved?

**Crux.** Rule out the count and the rule before blaming members, and find the step that moved before blaming the step that is low.

## 6 What is fixed first, and what does the interviewer hear?

| Line | On the case |
|---|---|
| The step | Checkout start to order, 72.5 to 55 percent, Android members, from 14 September |
| The size | About 1,317 orders a week, Rs 5.3 lakh at Rs 400 an order (Rs 4.0 to 6.6 lakh) |

"Before a cause, I check the count and what it counts; then cohort, platform and date; then the step that changed."

**Crux.** The checkout first, since it loses orders every week; sale-week members (20 against 49 organic) next.

## THE WORDS ON THIS SHEET

**Cohort** Members who joined in the same calendar month

**Retention curve** One cohort's share active at each age

**Funnel step** Those who reached a step over those who reached the one before, in one unit

**Skippable step** A step people can bypass, so its rate can pass 100 percent

**Unit** What a rate counts: sessions or members
