

typical, spread and the count underneath

Week 1, Day 4. Print landscape. Six panels, pictures only. The text sheet beside this one carries the words.

1 three answers to one question

Crux. the shape of the column decides which of the three is honest.

2 what one order does

Crux. a mean that only one record reaches is a number about that record.

3 reading the shape with no chart

Crux. skew reads off sorted values, with no library and no formula.

4 spread, and what each measure is made of

Crux. the fence spots the tail, and it proves nothing about the row it catches.

5 one event, three denominators

Crux. every rate travels with the count it rests on.

6 what leaves your desk

Crux. the deliverable is the sentence, and the table is the working.

THE WORDS ON THIS SHEET

Mean The total shared out equally, which every value takes part in

Median The value standing in the middle of the sorted column

Mode The exact value that repeats most, which on money repeats twice in 44

Range Maximum minus minimum, built from the two least typical values

Interquartile range The spread of the middle half, and the basis of the fence

Skew Which side of the median the tail is on

Denominator The count a rate rests on, which travels with it

Trust floor A record count below which you decline to rank, chosen and defended
