

1 The rhythm

Teaching runs from Monday 5 October 2026 to Saturday 20 February 2027. Build weeks are 3, 6, 9, 12 and 15; major exams sit in Weeks 5, 10 and 16.

Crux. Two teaching weeks, then a build week, five times; Week 0 comes before, and Week 16 and the capstone come after.

2 Six steps, six roles

Weeks	The role it opens
1 to 4	Data or Business Analyst
5 and 6	Entry-level Data Scientist
7 to 9	The foundation for AI Engineer
10 to 12	GenAI or AI Engineer
13 to 15	Agentic AI Engineer
16 to 20	Forward Deployed Engineer

Crux. Every step ends with something you can say in an interview.

3 The three shapes of a week

Day	What runs
Teaching day	A business question, the thinking, the technique, your turn, a Kahoot
Saturday	A paper of about two hours, swapped and marked to a key, then the answers said aloud
Build week	A brief, a build with checkpoints, a mock interview, a group discussion, a live demo

Crux. The quizzes and the Saturday paper are not graded; they tell you what to fix.

4 The three seats

Seat	Its first question
Business owner	What decision does this change, and by when?
AI engineer	What will it take to build, and how will we know it works?
Forward deployed engineer	Will it run where the client works, and who keeps it running?

Crux. The seats are this programme's own way of seeing a project, and every build week you sit all three.

5 This week, and your workspace

Claimed on Monday, measured on Tuesday, agreed in a ten-minute one-to-one on Wednesday or Thursday, and written on your baseline card.

Closing the tab does not stop a codespace. Stop it from github.com/codespaces, because the free plan's 120 core hours are about 30 hours on this starter's four cores.

Crux. The gap between what you claim and what you can do is this week's one number, and it is yours.
